a) Population data for the historical and projection period are from the United Nations Population Division: World Population Prospects Database, 2004 Revision (medium variant). For OECD member countries, historical data for real GDP, private consumption expenditure deflator and exchange rate were obtained from the OECD Economic Outlook No. 78, December 2005. For non-member economies, historical macroeconomic data were obtained from the World Bank, November 2005. Assumptions for the projection period draw on the recent medium term macroeconomic projections of the OECD Economics Department, projections of the World Bank and responses to a questionnaire sent to member country agricultural experts. Data for the European Union are for the euro area aggregates. b) Annual per cent change. The price index used is the private consumption expenditure deflator. c) Excludes Iceland. e) Annual weighted average real GDP and PCE deflator growth rates in OECD countries are based on weights using 1995 GDP and purchasing power parity

For a complete description of the technical assumptions made, please see the Methodology section.

a) Beginning crop marketing year - see Glossary of Terms for definitions. b) Year beginning 1 July. c) Prices and payments in market Euro - see Glossary of Terms. d) EU farmers also benefit from the Single Farm Payment (SFP) Scheme, which provides flat-rate payments independent from current production decisions and market developments. The total amount spent under the SFP scheme, before modulation, is assumed to increase from 26.9 billion Euro in 2005 to 28.4 billion Euro in 2008 for the total of the 15 former member States. The final number is equivalent to 233 Euro per hectare of eligible farm land on average. For the accession countries, payments are phased in with the assumption of maximum top-ups from national budgets. Due to modulation, between 2.7% and 4.6% of the total SFP will go to rural development spending rather than directly to the farmers. e) Common intervention price for soft wheat, barley, maize and sorghum.

f) Compensatory area payments. g) Actual payments made per hectare based on program yields. h) Subject to a purchase limit of 75 000 tonnes per year. i) The export volume excludes 0.4mt of exported potato starch. The original limit on subsidised exports is 11.2 mt. j) Government purchase price, domestic wheat. k) Government purchase price, barley, 2nd grade, 1st class. l) Husked rice basis. m) Applies to producers of wheat, maize and sorghum. n) Includes wheat, barley, maize, oats and sorghum. o) Average per tonne of total exports. p) Indian input subsidies consist of those for electricity, fertiliser and irrigation.

Note : The source for tariffs and Tariff Rate Quotas is AMAD (Agricultural market access database). The tariff and TRQ data are based on Most Favoured Nation rates scheduled with the WTO and exclude those under preferential or regional agreements, which may be substantially different. Tariffs are simple averages of several product lines. Specific rates are converted to ad valorem rates using world prices in the Outlook. Import quotas are based on global commitments scheduled in the WTO rather than those allocated to preferential partners under regional or other agreements. For Mexico, the NAFTA in-quota tariff on maize and barley is zero, while the tariff-rate quota becomes unlimited in 2003 for barley and 2008 for maize. est.: estimate.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.

est.: estimate, NA: Not available.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.

a) Beginning crop marketing year - see Glossary of Terms for definitions. b) Calendar year, except for China and subsidised export limit in USA, beginning 1 July. c) Prices and payments in market Euro - see Glossary of Terms. d) EU farmers also benefit from the Single Farm Payment (SFP) Scheme, which provides flat-rate payments independent from current production decisions and market developments. The total amount spent under the SFP scheme, before modulation, is assumed to increase from 26.9 billion Euro in 2005 to 28.4 billion Euro in 2008 for the total of the 15 former member States. The final number is equivalent to 233 Euro per hectare of eligible farm land on average. For the accession countries, payments are phased in with the assumption of maximum top-ups from national budgets. Due to modulation, between 2.7% and 4.6% of the total SFP will go to rural development spending rather than directly to the farmers. e) Compensatory area payments, before penalties.

f) Payments made per hectare based on regional yields. g) Weighted average of autumn/winter and spring/summer. h) Indian input subsidies consist of those for electricity, fertiliser and irrigation.

Note : The source for tariffs and Tariff Rate Quotas is AMAD (Agricultural market access database). The tariff and TRQ data are based on Most Favoured Nation rates scheduled with the WTO and exclude those under preferential or regional agreements, which may be substantially different. Tariffs are simple averages of several product lines. Specific rates are converted to ad valorem rates using world prices in the Outlook. Import quotas are based on global commitments scheduled in the WTO rather than those allocated to preferential partners under regional or other agreements. For Mexico, the NAFTA tariffs on soybeans, oil meals and soybean oil are zero after 2003.

a) Prices and payments in market Euro's - see Glossary of Terms. b) EU farmers also benefit from the Single Farm Payment (SFP) Scheme, which provides flat-rate payments independent from current production decisions and market developments. The total amount spent under the SFP scheme, before modulation, is assumed to increase from 26.9 billion Euro in 2005 to 28.4 billion Euro in 2008 for the total of the 15 former member States. The final number is equivalent to 233 Euro per hectare of eligible farm land on average. For the accession countries, payments are phased in with the assumption of maximum top-ups from national budgets. Due to modulation, between 2.7% and 4.6% of the total SFP will go to rural development spending rather than directly to the farmers. c) Price for R3 grade male cattle.

d) Year beginning 1 July, except for E10 which is calendar year. Poland has a commitment on export subsidies on unspecified meat. e) Ending 1 July 2002, replaced by basic price for storage. f) Starting 1 July 2002. g) A supplementary payment of 7 euro per head is provided for Less Favoured Areas. h) Weighted average of all bull and steers payments. i) Includes national envelopes for beef. j) Includes live trade. k) Year beginning 1 April. l) Pig carcass imports. Emergency import procedures triggered from November 1995 to March 1996, from July 1996 to June 1997, from August 2001 to March 2002, from August 2002 to March 2003 and from August 2003 to March 2004.

Note : The source for tariffs and Tariff Rate Quotas (excluding Russia) is AMAD (Agricultural market access database). The tariff and TRQ data are based on Most Favoured Nation rates scheduled with the WTO and exclude those under preferential or regional agreements, which may be substantially different. Tariffs are simple averages of several product lines. Specific rates are converted to ad valorem rates using world prices in the Outlook. Import quotas are based on global commitments scheduled in the WTO rather than those allocated to preferential partners under regional or other agreements. For Mexico, the NAFTA in-quota tariff on poultry meat is zero and the tariff-rate quota is unlimited from 2003.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.

d) Excludes trade of live animals.

est.: estimate, NA: Not available.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.

d) Excludes trade of live animals.

est.: estimate, NA: Not available.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.

d) Excludes trade of live animals. Imports and Exports of sheep meat are not covered for all countries and regions.

a) Year ending 30 June. b) For manufacturing milk. c) The effective volume of cheese and SMP subsidized exports will be lower reflecting the binding nature of subsidized export limits in value terms. d) Prices and payments in market Euro's -see Glossary of Terms. e) EU farmers also benefit from the Single Farm Payment (SFP) Scheme, which provides flat-rate payments independent from current production decisions and market developments. The total amount spent under the SFP scheme, before modulation, is assumed to increase from 26.9 billion Euro in 2005 to 28.4 billion Euro in 2008 for the total of the 15 former member States. The final number is equivalent to 233 Euro per hectare of eligible farm land on average. For the accession countries, payments are phased in with the assumption of maximum top-ups from national budgets. Due to modulation, between 2.7% and 4.6% of the total SFP will go to rural development spending rather than directly to the farmers.

f) Total quota, EU25 starting in 1999. g) Calendar year minimum access for Australia, New Zealand and Canada before 1995. h) In addition to direct payments, a further payment is provided - equal to 80% difference between the market price and the base price (the average price of the past three years). i) Excludes processed cheese. j) Year beginning 1 January. k) The counter-cyclical payment is determined as a 45% difference in 2005 and a 34% difference in 2006 and 2007, between the target price and the Boston class I price.

Note : The source for tariffs and Tariff Rate Quotas (except Russia) is AMAD (Agricultural market access database). The tariff and TRQ data are based on Most Favoured Nation rates scheduled with the WTO and exclude those under preferential or regional agreements, which may be substantially different. Tariffs are simple averages of several product lines. Specific rates are converted to ad valorem rates using world prices in the Outlook. Import quotas are based on global commitments scheduled in the WTO rather than those allocated to preferential partners under regional or other agreements.

est.: estimate.

a) For EU(25), World, Developed, OECD and Western Europe growth rate refers to 1999-2005.

b) Least-squares growth rate (see glossary).

c) Refers to mainland only. The economies of Chinese Taipei, Hong Kong (China) and Macau (China) are included in the Other Asia Pacific aggregate.
