

OECD Standard Codes for the Official Testing of Agricultural and Forestry Tractors

THE FINANCING OF THE CODES

This document is submitted to the Annual Meeting of the Representatives of the National Designated Authorities to be held from 3-5 April 2000 [see AGR/CA/T/A(2000)1, item 11]. It is distributed to delegations and National Designated Authorities for INFORMATION and COMMENTS to be sent in by 15 March 2000.

NOTE BY THE SECRETARIAT

Background

1. The financing of the Codes, a Part II Programme of the Organisation, rests upon two sources of funding:

- a budgetary one, using the OECD percentage scale with a per-country minimum of 0.10% and maximum of 25%, and excluding the 4 OECD Member countries which never participated (Australia, Hungary, Mexico and New Zealand). The non-members of OECD which participate in the Codes are assessed on a flat rate basis, currently set at FRF 30.000 (China, India and the Russian Federation).
- an extra-budgetary one, by way of single test approval fees cashed in by OECD and repaid to a technical Co-ordinating Centre by the Organisation by virtue of an annual contract. The function of the Co-ordinating Centre, which verifies the consistency of testing procedures on behalf of OECD, has been entrusted for many years to Cemagref of France on a bid for tender procedure.

2. The 1999 budget for the Codes reached FRF 1 618 700, of which the cost for Member countries was FRF 1 528 700, and the extra-budgetary single-test based income was for 1998: 913.400 FRF and 1999: 697.900 FRF, transferred to Cemagref.

3. The issue of the best funding approach has been thoroughly discussed since 1992. The outcomes of the discussions have been manifold, such as the confirmation of participation of all Member countries, the close monitoring of the budget, the assessment of internal funding on private sources in some countries, the significant increase of non Members' contributions to reflect better the cost incurred by the Organisation from their full participation, the introduction of a competitive procedure for the appointment of the technical Co-ordinating Centre, etc. If outreach or development or technology transfer activities could not be developed for lack of increase of resources, considerable efforts were devoted to user-friendly communication and spreading of test results for the benefit of users.

4. The two-tier approach proposed below aims to reflect better the mixture of (1) the extent of use of the Codes, fairly independent of the size of countries, and (2) the public good benefits (product information, education, safety) that tend to be more dependent of country size.

1. Rationale

This document was prepared by the Secretariat on the basis of a US proposal. The US purposed to narrow down the range of contributions and eliminate the distinction between OECD Members and non-members in the type of assessment. The result would be a more fair and uniform way of calculating the national contributions to the OECD Standard Codes for the official testing of agricultural and forestry tractors.

For information, the annual lumpsum and full contribution currently applicable to non-members only is FRF 30.000 (roughly equivalent to USD 5 000). In contrast, OECD Members' variable and full contributions range from FRF 1 500 (about USD 250) to FRF 400 000 (about USD 67 000); all figures applicable to OECD Members are approximate and rounded off.

The proposal introduces a common lump sum fee applicable to all participating countries, OECD Members and non-members large and small alike. To the fee is added a variable contribution calculated according to the OECD's official 1999 scale of contributions extended to include non-members.

Although the lower levels of base contributions are interesting for comparisons, a more fair and uniform distribution of assessment is not truly achieved if they are retained. It is believed that the minimum base contribution needs to be much closer to the FRF 30.000 lump sum fee currently applied to non-OECD members of the Codes.

It was also requested of the Secretariat to prepare a proposal minus the United States in case of a possible withdrawal of their country from the Codes.

The Secretariat has slightly revised the US proposal to bring it into conformity with the OECD budgetary procedure which must be adhered to at the present time. In order to change the OECD scale of contributions, it is necessary to obtain approval by the Committee for Agriculture followed by Council approval to amend the current system.

2. Content of the Tables

Calculations represent full Part II financing of the Tractors Group, in application since budget year 1998. All 28 countries (25 Members and 3 non-members) have been assessed on an equal basis.

The OECD scale is used here to calculate the variable contributions paid by each country in addition to its lump sum. Country percentages in the "OECD" scale are based on a concept of taxable income per capita multiplied by the size of population so that less wealthy countries pay less than their size may justify. Minimum and maximum percentages are 0.10 and 25 per cent respectively. Maximum yearly increases are 10 per cent in relative terms and 0.75 percentage points in absolute terms. This was made to apply to both OECD Member and non-member countries.

Any comparison to the nearest franc with the exact contributions of 1998 is not advised because the 2000 data (scale, budget volume and contributions) is indicative. The budgetary data has been rounded off to FRF 1.600.000 for simulation purposes.

3. Analysis of proposals

The following hypothetical minimum lump sums are proposed: FRF 5.000, FRF 10.000, FRF 15.000 and FRF 20.000, FRF 25.000 and FRF 30.000 have been included as a reference only.

3.1 *Minimum lumpsum contribution of FRF 5.000*

- With the US included (Table 1)

For the FRF 5.000 lump sum payment, there is no indication of savings in any Member country except France, Germany, Italy, Japan and the US, which show a very modest amount of savings. There are considerable savings for the 2 non-member countries (China and India) and a minimal amount of savings for Russia.

As for this proposal, the 5 largest contributing Member countries pay slightly less as well as all three non-member countries.

- Without the US (Table 2)

For this proposal, the contributions for all Member countries increase, except for Japan whose contribution decreases by approximately FRF 6.000. China's contribution decreases a bit more, India's contribution stays about the same and Russia's contribution, on the contrary, increases by FRF 10.000.

3.2 *Minimum lumpsum contribution of FRF 10.000*

- With the US (Table 3)

The countries benefiting from a reduction in their payment are the same as for the FRF 5.000 lumpsum; the difference being a slight increase in the reduction of the payments. China and India's contributions decrease slightly whereas Russia's contribution increases by approximately FRF 1.600.

At the FRF 10.000 level, the 5 largest contributing countries benefit by a more significant decrease in their contribution payment whereas the contribution for China and India still decrease (but less) and Russia's payment increases slightly.

- Without the US (Table 4)

The trend continues with Japan's contribution decreasing considerably and with Russia's contribution increasing FRF 12.000 approximately, with a FRF 2.000 increase from the FRF 5.000 level.

3.3 *Minimum lumpsum contributions of FRF 15.000 and FRF 20.000*

- With the US (Tables 5 and 7)

With each increase in the minimum lumpsum payment, all Member countries (with the exception of France, Germany, Italy, Japan and US) see their total contribution increase. On the other hand, with the increase in the lumpsum payment, these five countries see their total contribution decrease.

As for non-member countries, with the increase in the lumpsum payment, China and India's contribution continue to decrease but at a reduced rate for each increase in the lumpsum payment. Except for the FRF 5.000 level, Russia's contribution steadily increases.

- Without the US (Tables 6 and 8)

For Member countries, the same trend continues for this level of contribution.

For non-members, at the FRF 20.000 lumpsum level, only India's contribution decreases whereas China's contribution increases slightly and Russia's increases as compared to the +FRF 15.000 level.

3.4 Minimum lump sum contribution of FRF 25.000 and 30.000

These levels are closer to the current lumpsum applicable to non-members of the OECD. Savings are maximum for the USA and Japan but all smaller OECD countries and all non-OECD members are worse off with the FRF 30.000 amount.

4. Preliminary Conclusions

The calculations using the minimum lumpsum payment of FRF 5.000 should be discarded for the purpose of this exercise as the total of the lumpsum payments (FRF 140.000) barely changes the current distribution of payments.

The minimum lumpsum payment of FRF 20.000 could also be dismissed owing that except for the 5 largest contributing countries, all Members countries will see their contributions increase significantly. China and India only benefit slightly from a decreased contribution and Russia's payment increases FRF 7.000 to a total of approximately FRF 37.000 annually.

As to the FRF 10.000 minimum lumpsum payment, an increase will be borne by 20 of the 25 Member countries and a savings will be reached by the other 5.

For the FRF 15.000 lumpsum level, 19 Member countries will see their contribution levels increase and 6 Member countries' contribution levels will decrease. Along with the 5 largest contributors, the United Kingdom's contribution will also decrease slightly, by approximately FRF 100.

As far as the possible withdrawal of the United States from the Tractors Group, all Member countries will bear the burden of increased contributions with the exception of Japan who benefits by seeing its contribution decreasing by -1.7% at the FRF 5.000 level and up to -25% at the FRF 20.000 level.

For the two non-member countries (China and India) the FRF 5.000, FRF 10.000, and FRF 15.000 levels represent a reduction when compared to the FRF 30.000 contribution currently in force. Russia, on the other hand, sees its contribution increase FRF 10.000 to FRF 40.000 at the FRF 5.000 level and increase to a total contribution amount of FRF 45.000 at the FRF 20.000 lumpsum level.

To best accommodate the budgets of the maximum number of participating countries it will most likely be necessary to choose between the FRF 10.000 and FRF 15.000 lumpsum scenarios. The supplemental variable fee requested of other countries must be acceptable and this may be a point to be discussed.

To summarize (taking into account Member and non-member countries):

FRF 10.000	21 countries will pay more, 7 will pay less
FRF 15.000	20 countries will pay more, 8 will pay less

than under the current system.

5. Committee for Agriculture

For information, the Memorandum of the Committee for Agriculture Meeting held on 26-28 May 1998 concluded as follows [AGR/CA/M(98)2, item 29]:

“Part II Activities - Codes and Schemes

The Committee was informed of the discussions held in the various bodies involved in the Codes and Schemes as regard more appropriate ways of funding these Part II activities. Possible changes in the scales of contributions to better reflect their relative importance among countries have been proposed or are about to be.

It should indeed be noted that the scale of contributions issue has been the subject of protracted discussion in the Organisation.

6. Future action

Delegates are invited to study the proposals of the present document, and to send their comments to the OECD Secretariat by 15th March 2000 at the latest.

The implementation of the new scales and levels of contributions would not normally occur before the budget year starting on 1st January 2001.
